'Nutrition for Children' Program for Slum Communities in Bangalore, India

Malnutrition is a major threat to the health status of Indian children residing in slum communities. Malnutrition being a contributor and consequence of poor immunity, adversely impacts children's physical and cognitive development. To address the high incidence of stunting and wasting among children in Bangalore, India, a feasibility and pilot study...

A Feasibility and Pilot Study in Nutrition Intervention for Child Health- Bangalore, India

Indian schoolchildren residing in slum areas of Bangalore are at high risk of malnutrition thereby impairing their physical and mental development. These stunted and wasted schoolchildren of Parikrma Humanity Foundation may struggle to reach their full potential because of their poor nutritional status.
