

Position Title	Category	Adtext
Assistant Manager (Geospatial Modelling)*	Others	<p>You establish, plan, and schedule various mapping workflows, and liaise with external users on their mapping requirements, and carry out amendments to existing map data to suit operational needs. You conduct proof and quality checks on all maps and imagery products to ensure they meet stringent accuracy and quality requirements. You supervise a team of specialists, and ensure their work conforms to industry standards. You also assist in the evaluation and training of new technologies and software, and support the integration with the existing mapping systems and processes. Your challenge lies with understanding the purpose and intent of the maps being created, make discerning decisions and establish appropriate map specifications and layouts for the various operational maps, work with tight deadlines without compromising the end product, and keeping abreast with the latest technological developments.</p> <p>You must have a tertiary qualification in any technical field (e.g. Engineering IT, Surveying, GIS, Remote Sensing etc). You should have a keen eye for details, good color and 3D perception (must be able to see 3D using stereographic equipment), good computer graphic skills, basic IT knowledge, as well as good writing and communications skills. Basic web design skills is also preferred.</p> <p>(Candidates with no experience may also apply.)</p> <p><b>Only shortlisted candidates will be notified.</b></p>
Manager (Curriculum Development – Cyber)*	Training	<p>You enhance training effectiveness, efficiency and engagement to meet the Army's training and learning needs in the domain of cyber security. On this, you develop, implement and review training curricula and materials. You also operationalise learning technologies, evaluate training and learning solutions and develop assessment tools to measure trainees' competencies. Your challenge lies in working with multiple stakeholders at the same time and staying current with the latest developments in cyber security, in order to constantly enhance and improve the training system and curricula.</p> <p>You must have a tertiary qualification in an information technology or cyber security-related discipline, preferably with 3 years' of relevant work experience in cyber security. You must be meticulous, and able to multi-task and work under tight deadlines. Possession of good interpersonal and communication skills is essential. Appointment will be commensurate with your experience.</p> <p>(Candidates with no experience may apply.)</p> <p><b>Only shortlisted candidates will be notified.</b></p>
