Lendlease Digital

Farwa Syed
Developer

Engineering

I work as front end engineer on a software app. I work closely with UI/UX design team on adding new features. My day to day also involves troubleshooting the buggy code and learning the best practices/development tools to help build better code and application.

I am currently working on one of the Podium products which is basically a full fledged digital rehearsal of a process from design to operation of the built world.

If you enjoy developing/creating valuable new features and if you have the learning on the go attitude, then you should consider a role in engineering.

Jennifer Chanhthaleuxay
Product Owner

Product

I am a Product Owner for Employee Experience Products. My day to day role includes attending agile ceremonies such as sprint planning, retrospective and sprint review in order to inspect the progress of work towards increasing a potentially releasable increment of a product feature. I work closely with the scrum master, product manager and dev team to fine tune requirements from stakeholders and convey the product vision.

I am currently working on the Knowledge Gateway product which is an initiative to codify our knowledge and best practices into an intuitive, personalised and engaging platform that will connect together people and knowledge at the right time to give our teams a competitive edge.

If you enjoy engaging with various stakeholders, iterative process improvement, and have a strong desire to create products that will transform the customer/employee experience then you would be well suited as a Product Owner.

Andrew Kuo
Data Scientist

Data

My role as a data scientist is quite varied but typically involves processing messy datasets and using statistical and machine learning techniques to solve problems for the business. I spend roughly 75% of my time writing code and the rest engaging with stakeholders.

I'm currently working on a project where the aim is to predict tenant satisfaction/dissatisfaction in residential properties Lendlease manage. I am using raw text from customer complaints, weather data and lease information for this task.

If you enjoy solving complex problems and extracting meaning from real world data then you should consider a role in data!
